

Omnitracs Deployment Guide

Tire Pressure Monitoring

Customer Training

Before beginning the Tire Pressure Monitoring deployment process ensure that customers have access to all training materials:

- Training Video: [Creating New Filters](#) - a video that will walk a customer through creating new filters in Vehicle Diagnostics.
- Training Video: [Creating Email Notifications](#) -a video that will walk a customer through creating email notifications in Vehicle Diagnostics

Customer Set Up

1. The Tire Pressure Monitoring application must be purchased and added through the Customer Portal.
2. Add the application to an existing operational profile or create a new operational profile.
3. Ensure that the customer has assigned vehicles with supported tire pressure monitoring systems to the correct operational profile.
4. A CSN Administrator will provision the application so that it appears on the Services Portal. This process is automatic but can take up to 24 hours.
5. Enable Vehicle Diagnostics in the operational profile.
6. Familiarize the Customer with Vehicle Diagnostics if necessary. Training videos are available.

Installation

1. Confirm that the tire pressure monitoring units have started reporting and broadcasting data to the services portal. Baseline data for each tire will be displayed.
