Fleet portal release notes v9.4.0

Modified on: Thu, 1 Feb, 2024 at 5:10 PM

Fleet Portal

v9.4.0 (2024-02-01)
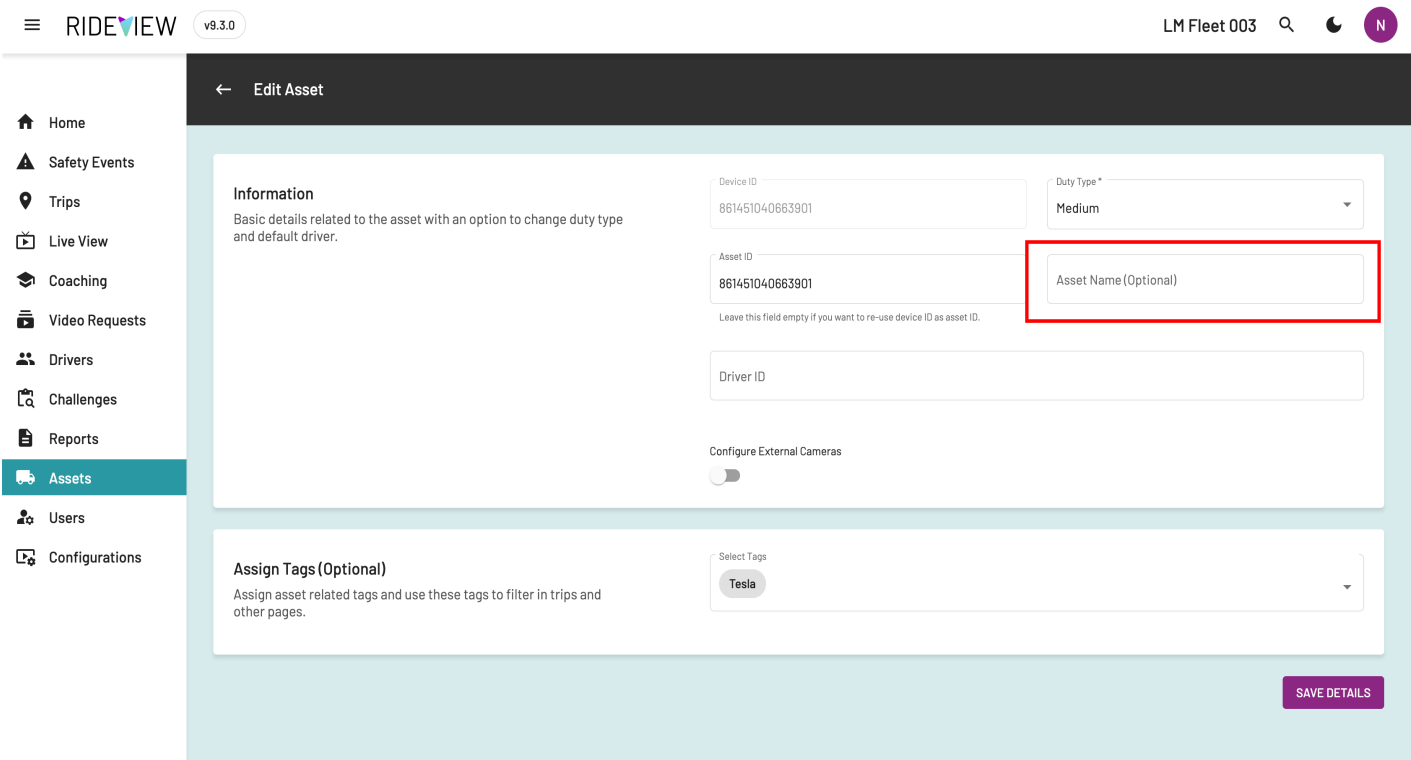

Enhancements:

1. **New Asset Name Support:** Now you can add asset names during semi-provisioning for better management of assets in terms of search and visibility.
2. **Introducing Workzone Sub-event (BETA):** Easily filter speed limit violations around a Workzone to better understand the impact of these events and coach drivers.
3. **Increased Comment limit:** The comment limit of 10 comments for each event for both portal and companion app users has been enhanced. Please note this is only applicable to fleets that use the companion app for drivers.
4. **Enhanced Configuration Information:** Easily view detailed information regarding each configuration on the portal by clicking on the information icon beside each feature name.

Bug Fixes:

1. **Minor Language Issues:** Resolved the spelling-related issues in the Portuguese Brazilian language.
2. **Resolution Issue:** Resolved the issues related to some features hidden in low-resolution devices.

Harsh Cornering — High 8.0 mph/sec ▾

Lane Drift

Seatbelt Violation BETA

Sidebar Information Panel

Distracted Driving

An event indicating the driver was distracted during driving - i.e. eyes not on the road , could be looking completely away from the road or eyes bowed down.

Pre-Event Video Duration

This is applicable if the media type is video. This indicates the time duration in seconds prior to the event detection from where the video capture starts.

Post-Event Video Duration

This is applicable if the media type is video. This indicates the time duration in seconds post the event detection until when the video should be captured.

Video Quality (Road Camera)

Sets the bitrate for video encoding for Road camera. Video Quality 0 will have the least bitrate resulting in smaller video file size, and quality 10 has the highest
