

OMNITRACS TAX MANAGER 3.0 RELEASE NOTES

Overview

We are pleased to announce that the OT1 Tax Manager 3.0 release will be available soon.

This release includes feature enhancements and software corrections.

Feature Enhancements

Support for Virginia IFTA Jurisdiction

Tax Manager now supports Virginia jurisdiction for IFTA reporting. This would facilitate in easy tax filing for customers that have IFTA reportable vehicles with Virginia as the reporting jurisdiction.

The application has been updated to allow customers to select Virginia jurisdiction where necessary and to retrieve relevant information to continue with the filing process smoothly.

Software Corrections

| Work Item Number | Issue | Component |
|------------------|--|-------------|
| TM-4014 | The rows in the Tax Manager reports were not ordered by jurisdiction and/or vehicle ID earlier. This release fixes the issue by sorting the rows in the ascending order of jurisdiction and/or by vehicle ID. | Tax Manager |
| TM-4187 | The Oregon Highway Usage Tax (OR HUT) official filing report was not displaying the correct odometer values for the filing period, which has now been fixed. The starting and ending odometer values now correspond to the filing period accurately. | Tax Manager |
| TM-4189 | An error was displayed when the user tried to enter distance data that is more than 1 year old. However, the issue has been fixed to be able to enter the data that is up to 3 years old. | Tax Manager |
| TM-4157 | The surcharge column in the Tax Manager reconciliation report had values rounded off to two decimal places which has now been fixed to display the rate as is, in four decimal places. | Tax Manager |
