XRS Host v6.90.0006
RNA Host v6.9.5.4
Routing and Dispatch Client 6.9.5.1

Release Notes
Updated April 5, 2024

Contents

Compliance – Hours of Service

Improvements

Reporting Improvements

XRS-30032 – Operation Profile report CSV export has Entity column moved over to column AT instead as first column

We resolved an issue with the CSV export of the Operation Profile report that had an incorrect order of display for the Entity and Organization columns.

Web Service Improvements

XRS-29002 - Trailer WS - Incorrect validation of resource group membership, error "Resource Group does not belong to Organization Sid"

We resolved an issue with the Trailer Web Service that was returning an error when an attempting to create or update a trailer especially when the trailer and the resource group it belongs or assigned to, are from different organizations.

XRS-21797 – Trip web service to work with large datasets

We resolved an issue with the Trip web service that was taking too long to respond and sometimes did not return any result and errored out for dates that even involved less data.

DVIR Improvements

XRS-16268 – DVIR - Previous defects aren't closing out when driver certifies repairs

We resolved an issue with the DVIR defects where in spite of all repairs addressed and certified by driver, only the most recent instance of the defect was updated as certified and the defects from earlier inspection was still displayed as 'Not Reviewed'.

RNA – Routing

Improvements

RPE-112731 – Location Description is Displayed in Multiple Columns when Stops are Exported

We resolved an issue where users would see location description appearing in all the columns exported from the Stop window.
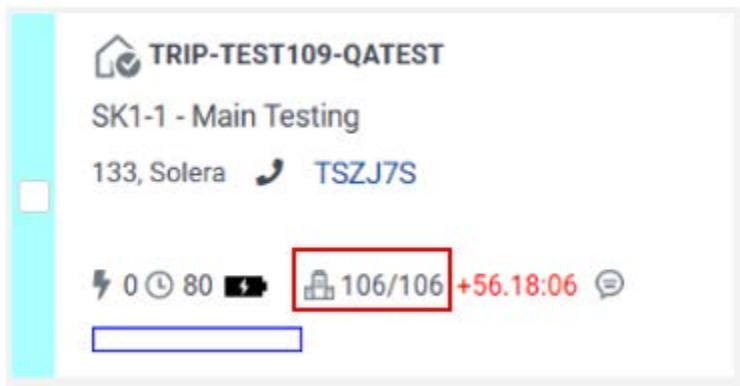

RNA – Dispatch

Improvements

RPE-112064 - The Planned Quantities values are preserved for orders with Line Items when suspending stops or routes
We resolved an issue where suspending a stop or route would result in planned quantities being reset to zero.
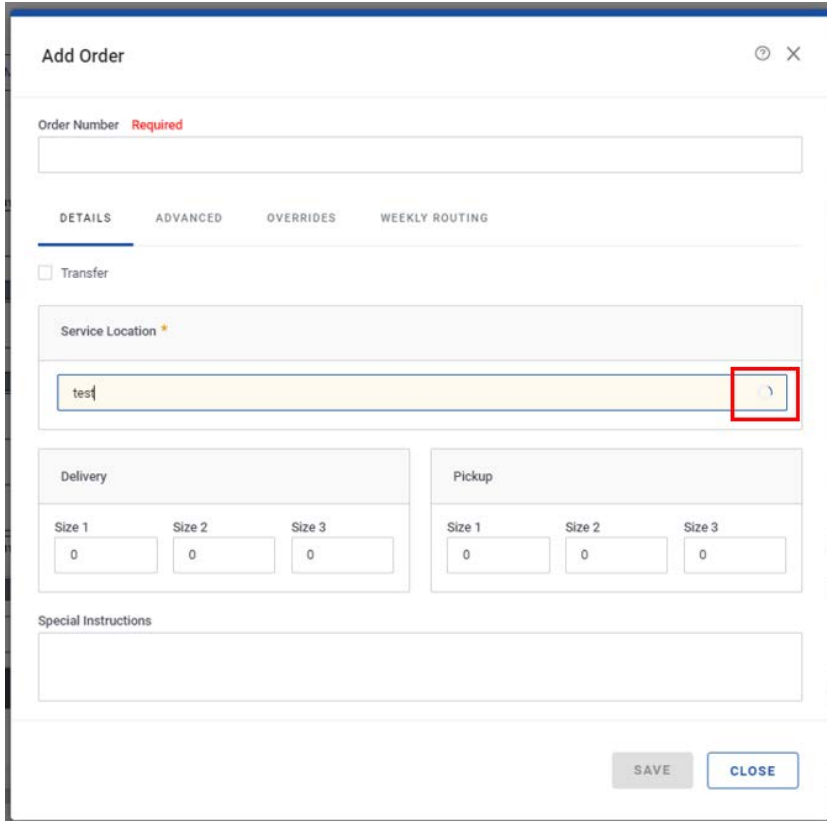

RPE-112661 – Users unable to view the complete Serviceable stops data in Cards View
We resolved an issue where users could only view partial data with ellipsis for Serviceable stops in Cards view when the card contained more data. With the latest update, the users can now view Serviceable Stops data up to three digits.

RPE-112738- Users not receiving Visual Feedback during the search process for Service Locations in Add Order Modal
We resolved an issue where users were not able to determine whether the system was searching for Service Location in the Add Order modal. To address this, a loader was added to provide visual feedback to the users during the search process.

Telematics & Performance Monitoring

Improvements

RPE-111981 – Odometer Jumps in T.2.06
Prior to this change, the odometer value came from a different source in ESS versus Latitude. This has been updated to have the equipment data be the source for the odometer in both instances.

RPE-110033 – OT1 – Fleet View – Discrepancy in Total Engine Run Time
Total engine run time calculation is now based on RPM, making the values more accurate and consistent with performance Monitoring calculations.

Compatibility Requirements

Please refer to our minimum requirements for system components that are used with these solutions:
