

Intelligent Vehicle Gateway (IVG) Firmware version DA1314R – Release Notes

Updated October 17, 2024

This release includes updates to the IVG's communication on the CAN to increase system reliability.

Improvements

Update to source address

Learned that some OEMs may now be using a J-1939 source address that has been used by the IVG. Update the IVH to use a different source address out an abundance of caution to prevent conflicts on the J-1939 network.

Changes to communication timing

Made a change to improve the timing of J-1939 communications out of an abundance of caution to ensure that there aren't conflicts with other devices on the network
