

## Installing the MSI Package for Omnitracs Routing & Dispatching Client

### MSI Package Overview

When using Omnitracs Client, you need administrative access on your computer to install the software. However, IT departments at large companies often restrict administrative access to users' computers. These IT departments may also automatically push updates or software programs out to your computer. The software or updates are pushed through tools such as Group Policy Object (GPO) or Purgos. While tools such as Purgos are acceptable to install EXE files, GPO is one of the tools that are only acceptable in an MSI file format. Omnitracs Client now offers an MSI Package, which will allow your tools to install upgrades or software programs on your organization's computers.

### How Often and Where to Find the MSI Package Installer

Omnitracs will provide an MSI Package for each quarterly release and as needed for service releases that occur between the quarterly releases. To download the MSI Package, visit the link below and follow the download instructions. Once you have successfully downloaded the MSI Package update for Omnitracs Client, you can push the download out to your organization's computers directly.

To download the MSI Package for Omnitracs Client, please open Omnitracs Client and go to Help - Support and Learning. When the site loads, search for MSI Package and click on the associated article to receive the download.

If you wish to receive emails regarding release notifications and links to various installers, including the MSI Package, or if you have any questions when installing the MSI Package for Omnitracs Client, contact Omnitracs Support.
